

Data Security with Microsoft & CYBER1 Solutions

As sensitive data grows, so do the associated risks. CYBER1 Solutions and Microsoft provide an advanced data security framework that safeguards critical information across clouds, applications, and devices. Our focus on data protection, risk management, and resiliency ensures the security of your organisation's most valuable assets.

Information Protection

Discovering, classifying, and protecting sensitive data throughout its lifecycle.

Data Loss Prevention

Preventing unauthorized or accidental use of sensitive data across apps, services, and devices.

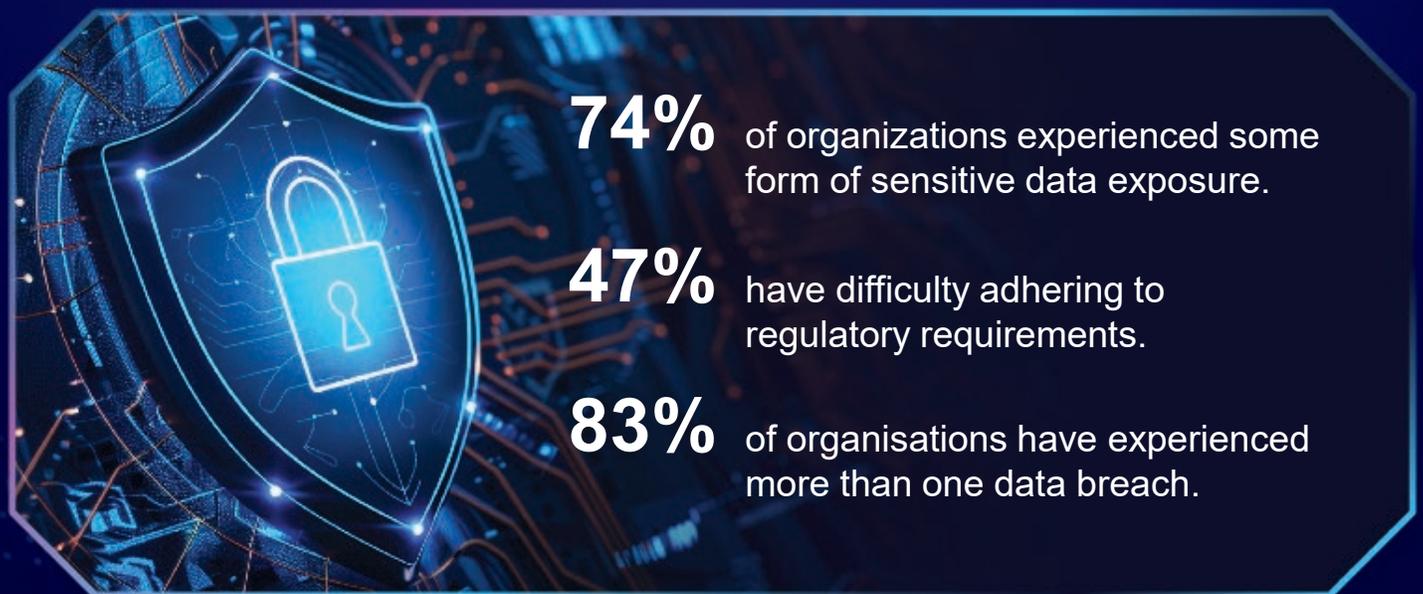

Insider Risk Management

Monitoring user activity to identify and mitigate risks posed by insiders.

Adaptive Protection

Balancing security and productivity by tailoring controls based on users' risk levels.

DO MORE WITH LESS

Unified Data Governance & Security

Enhanced Visibility & Insights

Simplified Regulatory Compliance

Data Security Workshop

Understand your current data security strategy with a custom data security assessment to uncover areas of concern in your current environment.

WHAT TO EXPECT

During this workshop, we'll work with you to strengthen your organisation's security framework, ensuring the protection of critical information across clouds, applications, and devices.

Evaluate how you are currently identifying and classifying sensitive data across your data estate.

Get recommendations about next steps across Information Protection, Data Loss Prevention, and Insider Risk Management.

Learn how to protect all your workloads, including Microsoft and non-Microsoft applications using a single solution.

Assess whether your current environment can stop egress and exfiltration of sensitive business information from employees.

Gain a deeper understanding of the effectiveness of your current data loss prevention strategy applications, services, and devices.
